

## Step 1: Investigation Preparation

Your first task is to set up directories to prepare for your investigation.

- A. Begin by making a single directory titled Lucky\_Duck\_Investigations
- B. In this directory, create a directory for this specific investigation titled Roulette\_Loss\_Investigation .
- C. In Roulette\_Loss\_Investigation , create the following directories:
- Player\_Analysis to investigate the casino player.
- Dealer\_Analysis to investigate the dealers.
- Player\_Dealer\_Correlation to summarize your findings of the collusion.
- D. Create empty files called Notes\_<Directory Name> under each sub-directory to store investigation notes.

*\*Notes: I decided to put the folder into the Desktop location to start and make it easier to organize and view or reference files as needed. The notes and instructions did NOT indicate where they should be placed specifically. Just wanted to make a forward note for this as the class Slack group mentioned to start in the home folder only, vs the instructions of the homework.*

Followed all steps above thereafter creating the Lucky\_Duck\_Investigations folder.

```

sysadmin@ubuntuucb: ~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Investigation/Dealer_Analysis

sysadmin@ubuntuucb:~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Investigation/Dealer_Analysis$
```

## Step 2: Gathering Evidence

1. Navigate to the directory where you created the Lucky\_Duck\_Investigations directory and run the following command to set up the evidence files:

```
wget "https://tinyurl.com/3-HW-setup-evidence" && chmod +x ./3-HW-setup-evidence && ./3-HW-setup-evidence
```

After running this command your current directory should have the following sub-directories:

Dealer\_Schedules\_0310 : Contains the dealer schedules.

Lucky\_Duck\_Investigations : Contains the investigation directories and notes files you created.

Roulette\_Player\_WinLoss\_0310 : Contains the data for player wins and losses.

\*Notes: All files downloaded successfully in this step with no issues.

```

2. The Dealer\_Schedules\_0310 and Roulette\_Player\_WinLoss\_0310 directories contain the dealer schedules and win/loss player data from the roulette tables during the week of March 10. Since the losses occurred on March 10, 12, and 15, move the schedules for those days into the directory Dealer\_Analysis. Move the files for those days into the directory Player\_Analysis.

```

### Step 3: Correlating the Evidence

Your next task is to correlate the large losses from the roulette tables with the dealer schedule. This will help you determine which dealer and player are colluding to steal money from Lucky Duck. Note: Winnings for Lucky Duck Casino are indicated with a positive number and losses are indicated with a negative number.

#### Complete the player analysis.

0. Navigate to the Player\_Analysis directory.
1. Use grep to isolate all of the losses that occurred on March 10, 12, and 15.
2. Place those results in a file called Roulette\_Losses.
3. Preview the file Roulette\_Losses and analyze the data.

*\*Notes: Used grep to search for “-” since all of the losses should have a negative symbol to easily find the lines that were needed for the Roulette\_Losses file.*

```

**\*Notes:** Used Nano in the following step to make edits to the file formatting. Not all of the data that were taken from the original win loss data was formatted correctly. There are some columns utilizing spaces vs tabs, or there were extra spaces and tabs there making the next step of organizing the data difficult or not work correctly. Some of the commas were also not spaced correctly, and those were adjusted as well.

2. Using your findings from the player analysis, create a separate script to look at each day and time that you determined losses occurred. Use awk , pipes , and grep to isolate out the following four fields:

Time

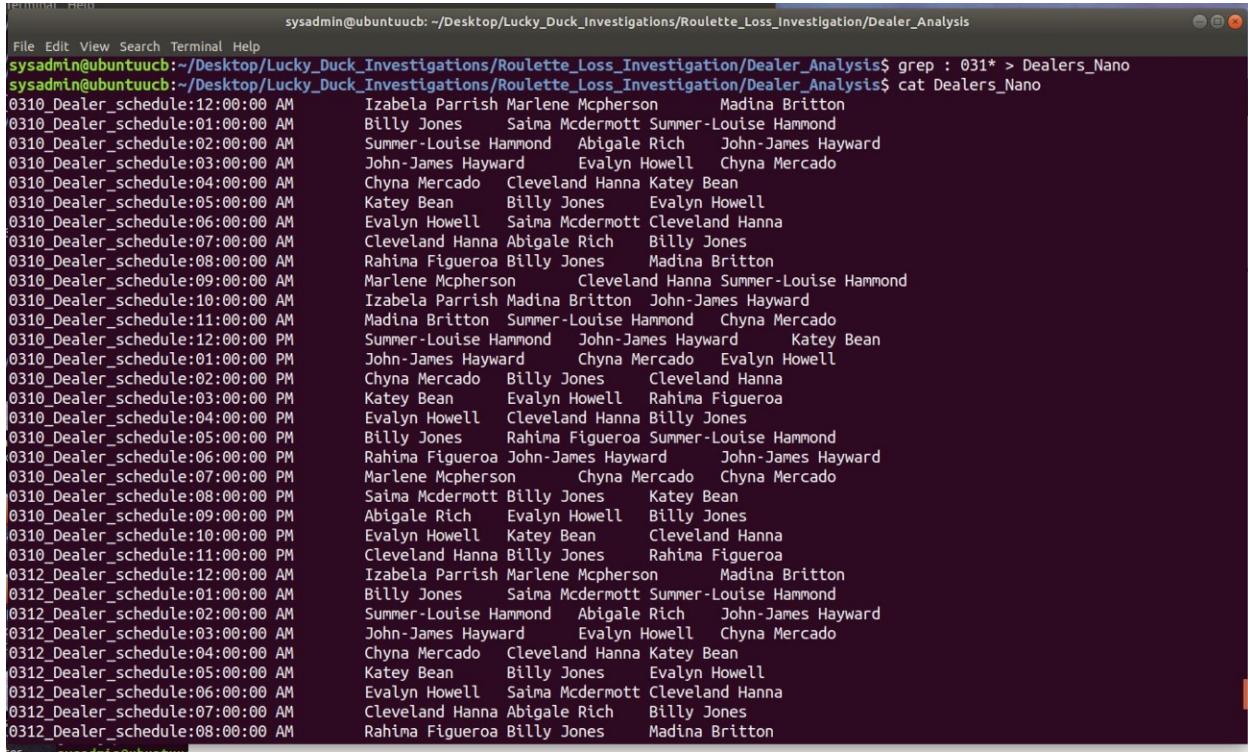

a.m./p.m.

First name of roulette dealer

Last name of roulette dealer

## Frank Lin - Unit 3 Homework - Terminal and Bash

\*Notes: Used the grep command to look for ":" since all of the files contained ":" to separate the time numbers and sent all of that data to the file Dealers\_Nano to work with further cleaning and organizing the data. The grep allowed me to put all of the files into a single file to pull data from later.

The screenshot shows a terminal window with the following text:

```
Terminal - F10
sysadmin@ubuntuucb: ~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Investigation/Dealer_Analysis$ grep : 031* > Dealers_Nano

\*Notes: Started a new file in nano to write a grep command for the script. The script(s) were named the respective dates, thus the inputs in the scripts were \$1 for the 2 digit time slot and \$2 for indicating whether it was AM or PM.

## Frank Lin - Unit 3 Homework - Terminal and Bash

The screenshot shows a terminal window with the title bar "sysadmin@ubuntuuucb: ~/Desktop/Lucky\_Duck\_Investigations/Roulette\_Loss\_Investigation/Dealer\_Analysis". The menu bar includes "File Edit View Search Terminal Help". The status bar shows "GNU nano 2.9.3" on the left, the file name "March10RD.sh" in the center, and "Modified" on the right. The main area of the terminal displays the following script content:

```
#!/bin/bash
# This is a script for running March 10's Roulette Dealers
grep "March10:$1:00:00 $2" Dealers_RouletteTable
```

Below the terminal window, a menu bar for the nano editor is visible, containing options like Get Help, Write Out, Where Is, Cut Text, Justify, Cur Pos, Exit, Read File, Replace, Uncut Text, To Linter, and Go To Line.

\*Notes: Saved the script file as the name of the date and closed out nano. Then used chmod to change the mode of the file to an executable file with “chmod +x” for my March10RD.sh script file. Ran a test with the “05” hour and “AM” inputs for the script to make sure it ran correctly.

I then copied the original March10RD.sh for to March12RD.sh and March15RD.sh for the subsequent dates needed. Used nano for each of those files to update the dates in the script to correspond correctly. Have a total of 3 scripts, 1 script for each date.

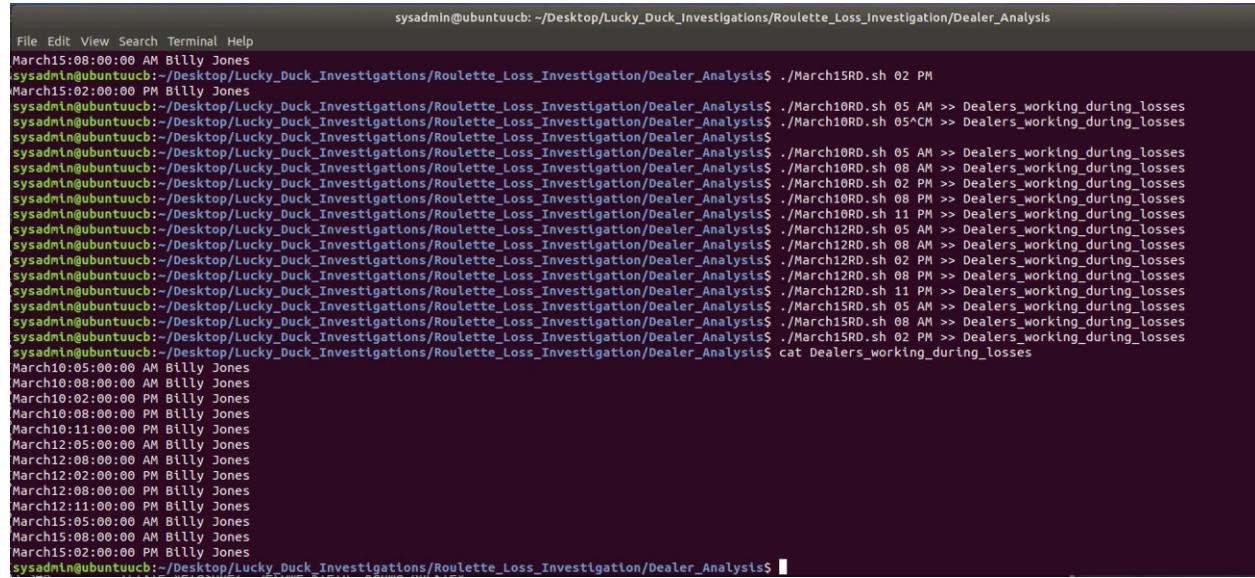

```
sysadmin@ubuntuuucb:~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Investigation/Dealer_Analysis$ chmod +x March10RD.sh

```

### 4. Preview your file Dealers\_working\_during\_losses and analyze the data.

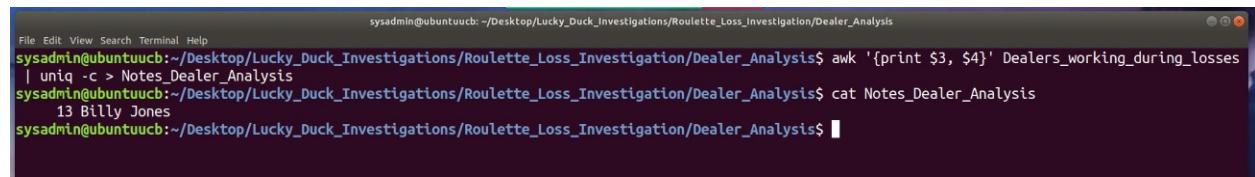

\*Notes: Used cat in the previous screenshot to preview and analyze the data.

Record in the Notes\_Dealer\_Analysis file:

The primary dealer working at the times where losses occurred.

How many times the dealer worked when major losses occurred.

\*Notes: Used the awk command to take the column for the First and Last name of the dealers listed in the Dealers\_working\_during\_losses file, then used the “uniq -c” command to count the number of times Billy Jones occurred and sent the data to Notes\_Dealer\_Analysis.

```
sysadmin@ubuntuucb: ~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Inv&gt; estigation/Dealer_Analysis$ awk '{print $3, $4}' Dealers_working_during_losses
| uniq -c > Notes_Dealer_Analysis
sysadmin@ubuntuucb:~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Inv&gt; estigation/Dealer_Analysis$ cat Notes_Dealer_Analysis
 13 Billy Jones
sysadmin@ubuntuucb:~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Inv&gt; estigation/Dealer_Analysis$
```

### 5. Complete the player/employee correlation.

In the notes file of the Player\_Dealer\_Correlation directory, add a summary of your findings noting the player and dealer you believe are colluding to scam Lucky Duck. Make sure to document your specific reasons for this finding.

## Frank Lin - Unit 3 Homework - Terminal and Bash

```
sysadmin@ubuntu: ~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Investigation/Player_Dealer_Correlation
File Edit View Search Terminal Help
GNU nano 2.9.3
Notes Player Dealer Correlation

After conducting an investigation into the losses of Lucky Duck Casino between the Players and the Dealers, my findings indicate that there is indeed a Player likely colluding with a Dealer at the Roulette tables to steal money from the casino.

All of the significant loss dates (March 10, 12, and 15) and times provided have a common player named Mylie Schmidt playing at the Roulette tables.

When comparing those loss dates and times with the Dealer schedules, I have found that Billy Jones has been on shift for all of the times that Mylie Schmidt has been playing.

All 13 time slots with losses during when Mylie Schmidt was playing match up to the 13 times Billy Jones was on his shift at the Roulette tables.

### Step 4: Scripting Your Tasks

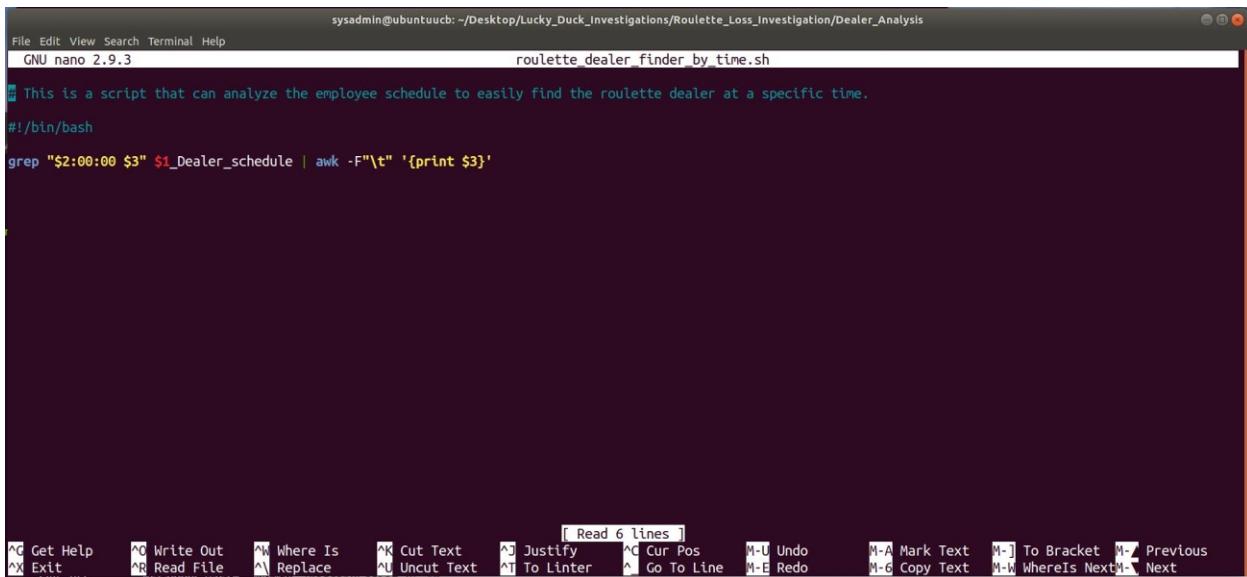

Your manager is impressed with the work you have done so far on the investigation. They tasked you with building a shell script that can easily analyze future employee schedules. They will use this to determine which employee was working at a specific time in the case of future losses.

Complete the following tasks:

1. Remain in the Dealer\_Analysis directory. Develop a shell script called roulette\_dealer\_finder\_by\_time.sh that can analyze the employee schedule to easily find the roulette dealer at a specific time. Design the shell script to accept the following two arguments:  
One for the date (four digits)  
One for the time

*\*Notes: Opened up nano for a new script file "roulette\_dealer\_finder\_by\_time.sh" and modified the script to output the name of the dealer working the Roulette table only when you input the date (\$1), time (\$2), and whether it was AM or PM (\$3). The script then takes the line data of the grep command to output just the name of the dealer in awk for clarity.*

## Frank Lin - Unit 3 Homework - Terminal and Bash

A screenshot of a terminal window titled "roulette\_dealer\_finder\_by\_time.sh". The window shows a shell script with the following content:

```
sysadmin@ubuntuucb: ~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Investigation/Dealer_Analysis
File Edit View Search Terminal Help
GNU nano 2.9.3
roulette_dealer_finder_by_time.sh
# This is a script that can analyze the employee schedule to easily find the roulette dealer at a specific time.

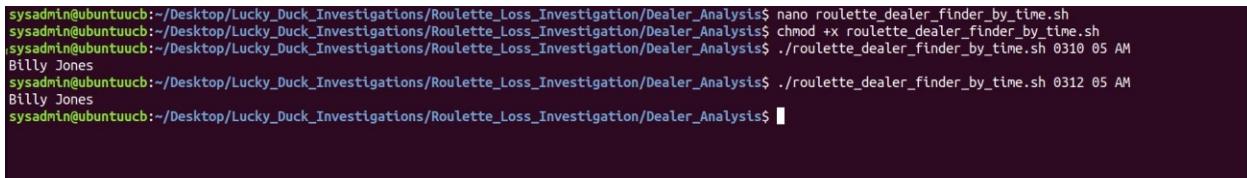

#!/bin/bash

grep "$2:00:00 $3" $1_Dealer_schedule | awk -F"\t" '{print $3}'
```

The terminal window includes a menu bar with "File", "Edit", "View", "Search", "Terminal", and "Help". Below the menu is the "GNU nano 2.9.3" status bar. At the bottom is a toolbar with various keyboard shortcuts for file operations like "Get Help", "Write Out", "Where Is", etc.

2. Test your script on the schedules to confirm it outputs the correct dealer at the time specified.

*\*Notes: Made the new script file executable and then tested the new script with some different dates and it works with outputting the Roulette dealer working that date and time.*

```
sysadmin@ubuntuucb:~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Investigation/Dealer_Analysis$ nano roulette_dealer_finder_by_time.sh
sysadmin@ubuntuucb:~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Investigation/Dealer_Analysis$ chmod +x roulette_dealer_finder_by_time.sh

### Bonus

In case there is future fraud on the other Lucky Duck games, create a shell script called roulette\_dealer\_finder\_by\_time\_and\_game.sh that has the three following arguments:

Specific time

Specific date

Casino game being played

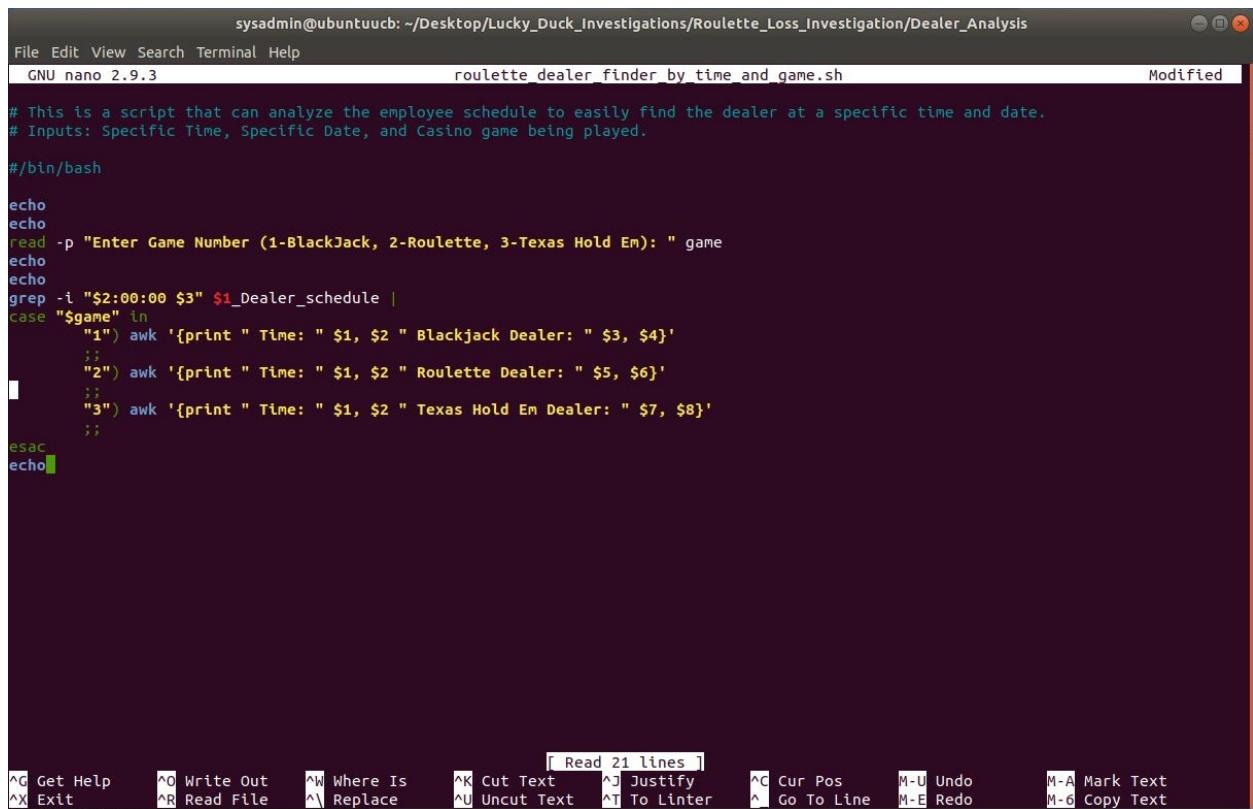

*\*Notes: Since the new script would need to work with new schedules in the future, I've taken the grep command of the last script for the casino to find the dealers that are working for a specific date and time with all of the schedule files. While trying to explore a possible "if" command to produce a specific dealer given a game, I've discovered the "case" script statement that would allow being able to output specific dealer names for the game given.*

*With this I needed an input command to read data from the command script or, another way was to add the "read" command to take input from the user to choose a game. In this case, I gave the case 3 options for the 3 types of games, and thus titled the read info to the user the 3 different games they could choose from. The "-p" option for prompt would ask the user which*

game to look at. For the next section, I used the grep command from the last script and piped it together to the case statement to produce the output given the \$game selection input from “read.”

Each option had the command awk to print out just the columns of the information from the grepped dealer schedule. The times \$1 and \$2 remained in the same location, but the sections for the dealer names were in separated columns, so \$3 and \$4 were first names and last name for Blackjack, while \$5 and \$6 were the first name and last name for the Roulette Dealer.

The “echo” commands used were to space out the lines in the terminal so that they looked cleaner to read.

```

sysadmin@ubuntuuucb: ~/Desktop/Lucky_Duck_Investigations/Roulette_Loss_Investigation/Dealer_Analysis
File Edit View Search Terminal Help
GNU nano 2.9.3                         roulette dealer finder by time and game.sh                         Modified
# This is a script that can analyze the employee schedule to easily find the dealer at a specific time and date.
# Inputs: Specific Time, Specific Date, and Casino game being played.

#!/bin/bash

echo
echo
read -p "Enter Game Number (1-BlackJack, 2-Roulette, 3-Texas Hold Em): " game
echo
echo
grep -i "$2:00:00 $3" $1_Dealer_schedule |
case "$game" in
    "1") awk '{print "Time: " $1, $2 " Blackjack Dealer: " $3, $4}'
    ;;
    "2") awk '{print "Time: " $1, $2 " Roulette Dealer: " $5, $6}'
    ;;
    "3") awk '{print "Time: " $1, $2 " Texas Hold Em Dealer: " $7, $8}'
    ;;
esac
echo

```

The terminal window shows the script being edited in nano. The script reads a game number (1, 2, or 3) and then uses grep and awk to extract the dealer's name and last name based on the specified time and game. The terminal status bar indicates the file is modified.

\*Notes: Tested out the new script with the dates, times, and games and it works! See below screenshot.

## Frank Lin - Unit 3 Homework - Terminal and Bash
